

# Processing

## Fruit and vegetable processing – hygienically controlled.

At Place UK's headquarters, and our Norfolk based growing centre, we plant, grow, process and pack strawberries, raspberries, blackberries, rhubarb and process many more imported fruits for our multi-national portfolio of clients.

All the locally grown produce is transported back to Tunstead, where we have our own substantial processing factory equipped with two Starfrost I.Q.F. Freezing Tunnels capable of 5 tonnes per hour continuous freezing, together with washing, inspection, fruit grading equipment and freezer storage warehouses.

Within this hygienic processing centre, we also process and freeze pulses, pasta, mung bean sprouts, char-grilled vegetables and have a fruit puree inspection, washing, sieving, chilling, packing and freezing line.

Place UK also 'Process' clients' own fruit and vegetables, and due to our Soil Association accredited status, we can process customers and other growers organic ingredients; we can even source a specific organic ingredient directly through our extensive global supply chain.
